1. LetsBe Biz — Website Copy

Version: 1.0 **Date:** February 26, 2026 **Owner:** Matt Ciaccio (matt@letsbe.solutions)
Companion docs: Brand Guidelines v1.0, GTM Strategy v1.0, Pricing Model
v2.2 **Note:** Copy is written in sections that map to page components. Place-
holder notes indicate where screenshots, videos, or other visual assets should
be added when available.

1.1 Page 1: Homepage

1.1.1 Hero Section

Headline: Your AI team. Your private server.

Subheadline: LetsBe Biz gives you 28+ business tools and AI agents that actually
do the work — all running on a dedicated server you control. One subscription. No
SaaS sprawl.

Primary CTA: Join the Waitlist *[Switches to "Become a Founding Member" when
beta opens]*

Secondary CTA: See Pricing

```
[VISUAL PLACEHOLDER: Product screenshot or short demo loop showing the dashboard
with AI agents active. When available, show the AI completing a real task - e.g., following
up with a lead, scheduling a post, updating the CRM.]
```

1.1.2 Section: The Problem

Headline: You're running your business on 14 different apps.

Body: One for email. One for your CRM. One for invoicing. Another for project
management. A file storage tool. A newsletter tool. A calendar. A chat app. A form
builder. Maybe an AI assistant that can talk but can't actually *do* anything.

You're paying hundreds a month for tools that don't talk to each other — and still
doing all the work yourself.

1.1.3 Section: The Solution

Headline: One server. Every tool. AI that works.

Body: LetsBe Biz replaces your entire SaaS stack with a single platform. CRM,
email marketing, invoicing, project management, file storage, and 20+ more tools —
pre-installed, pre-connected, and managed for you.

Then we add the part nobody else offers: AI agents that don't just answer questions
— they take action. Your AI follows up with leads, schedules posts, drafts invoices,
organizes files, and handles the work you never get to.

It all runs on a dedicated server in the region you choose — Germany for EU customers, Virginia for North American customers. Not shared hosting. Your own machine. Your data never touches our systems.

```
[VISUAL PLACEHOLDER: Split-screen or comparison showing "Before LetsBe" (grid of
SaaS logos with price tags) vs "After LetsBe" (single clean dashboard). Or: a simple
animation showing AI agents moving between tool icons, taking actions.]
```

1.1.4 Section: What's Included

Headline: 28+ tools. Zero setup.

Grid of tool categories (icon + name + one-line description for each):

Tool	Description
CRM	Track contacts, deals, and pipelines
Email Marketing	Newsletters, drip campaigns, automations
Invoicing	Send invoices, track payments
Project Management	Boards, tasks, timelines, team collaboration
File Storage	Your own cloud storage — private, unlimited by plan
Calendar	Scheduling, availability, integrations
Forms & Surveys	Collect data, signups, feedback
Website & Landing Pages	Build and host pages on your own server
Chat & Messaging	Internal team chat, customer communication
Notes & Wiki	Knowledge base for your business
Automation	Connect tools, trigger workflows, no code
Analytics	Track what matters across your business

...and 16+ more. [See all open-source tools →]

Subtext: Every tool runs on your server. They share data natively — no Zapier required.

1.1.5 Section: AI That Acts

Headline: Your AI doesn't just talk. It gets things done.

Body: Most AI tools give you a chatbot. LetsBe gives you a workforce.

Your AI agents connect to every tool on your server. They read your CRM, send emails, update project boards, draft documents, and handle the tasks that pile up when you're busy with clients.

Three examples (these become visual cards or a mini-demo):

- **"Follow up with that lead."** → Your AI checks the CRM, drafts a personalized email based on your last conversation, and sends it — or queues it for your approval.
- **"What's overdue this week?"** → Your AI scans your project board, invoicing, and calendar, then gives you a prioritized list with suggested next steps.
- **"Prep me for tomorrow."** → Your AI pulls your calendar, relevant CRM notes, recent emails, and project updates into a morning briefing.

`[VISUAL PLACEHOLDER: Short screen recording showing an AI agent completing one of these tasks in real time. Even a 15-second GIF would work here.]`

1.1.6 Section: Privacy, Not as an Afterthought

Headline: Your server. Your data. Your rules.

Body: Every LetsBe Biz customer gets a dedicated server in the region they choose — Germany (EU) or Virginia (US). Not a shared instance — your own machine. Your business data never touches our infrastructure or anyone else's.

GDPR-ready from day one. No third-party data sharing. No training on your data. You own everything on your server, and you can export or delete it anytime.

Three proof points (icon + short text):

- **Dedicated infrastructure** — Your own isolated server, not a multi-tenant cloud
- **Your choice of region** — Netcup data centers in Germany (EU) or Virginia (US)
- **Full data control** — Export, backup, or delete everything at any time

---

1.1.7 Section: Pricing Preview

Headline: Replace your SaaS stack for less than your CRM costs.

Body: Four tiers. No annual contracts. No hidden fees. Cancel anytime.

	Lite	**Build**	Scale	Enterprise
	€29/mo	**€45/mo**	€75/mo	€109/mo
	For getting started	**For running your business**	For growing teams	For serious operations

CTA: See full pricing →

1.1.8 Section: Founding Members

Headline: First 100 customers get Double the AI.

Body: We're opening LetsBe Biz to our first 100 founding members. You'll get 2× the AI tokens for 12 months — at standard pricing. No catch. You're betting on us early, and we're giving you more to work with.

You'll also get direct access to the founder and real influence on where the product goes next.

CTA: Become a Founding Member →

1.1.9 Section: Footer CTA

Headline: Stop juggling. Start building.

Subheadline: Join the waitlist and be first to know when LetsBe Biz opens to founding members.

CTA: Join the Waitlist [email input + button]

1.2 Page 2: Pricing

1.2.1 Hero

Headline: Simple pricing. Everything included.

Subheadline: Every plan includes all 28+ tools, AI agents, and your own private server. Pick the plan that matches your workload.

1.2.2 Pricing Table

	Lite	**Build** ★ Most Popular	Scale	Enterprise
Price	€29/mo	**€45/mo**	€75/mo	€109/mo
AI tokens	~8M/mo	~15M/mo	~25M/mo	~40M/mo
What that means	~100 AI tasks/mo	~200 AI tasks/mo	~350 AI tasks/mo	~550 AI tasks/mo
All 28+ tools	✓	✓	✓	✓
Dedicated server	✓	✓	✓	✓
AI agents	✓	✓	✓	✓

	Lite	**Build** ★ Most Popular	Scale	Enterprise
EU or US data center	✓	✓	✓	✓
Premium AI models	—	On demand	On demand	On demand
Priority support	—	—	✓	✓
Resource Server upgrade	+€6/mo	+€10/mo	+€14/mo	+€40/mo
	[Choose Lite]	**[Choose Build]**	[Choose Scale]	[Choose Enterprise]

Note: Build column is visually highlighted (slightly larger, brand color border, "Most Popular" badge).

1.2.3 Section: What Are AI Tokens?

Headline: AI tokens, explained simply.

Body: Every time your AI agents read, write, or take action, they use tokens. Think of tokens as your AI's energy — more tokens means your AI can do more each month.

The token count depends on which AI model handles the task. Simple tasks (sorting emails, quick lookups) use fewer tokens. Complex tasks (writing proposals, analyzing data) use more.

If you use all your tokens before the month ends, you can buy more at cost-based pricing — no markup surprises.

Most customers on the Build plan never run out. If you're unsure, start with Build and adjust later. You can upgrade or downgrade anytime.

1.2.4 Section: What's Included in Every Plan

Headline: No feature gates. No "upgrade to unlock."

Body: Every LetsBe Biz plan includes the same tools and capabilities. The only difference between tiers is how much AI capacity you get each month.

- All 28+ business tools
- AI agents with access to all your tools
- Dedicated private server (EU or US region, your choice)
- Automatic backups
- SSL, firewall, and security updates

- Data export at any time
- No annual contract — cancel anytime

1.2.5 Section: How We Compare

Headline: What you're paying now vs. what you'd pay with LetsBe.

Tool	Typical monthly cost	With LetsBe
CRM (HubSpot / Salesforce)	€20–150	✓ Included
Email marketing (Mailchimp)	€13–80	✓ Included
Project management (Asana / Monday)	€11–50	✓ Included
File storage (Dropbox / Google Drive)	€10–20	✓ Included
Invoicing (FreshBooks)	€15–50	✓ Included
Forms (Typeform)	€25–75	✓ Included
Automation (Zapier)	€20–70	✓ Included
AI assistant (ChatGPT Plus)	€20	✓ Included (and it actually acts)
Typical total	**€134–515/mo**	**€45/mo (Build)**

1.2.6 Section: Founding Member Banner

Headline: Double the AI. First 100 customers.
  Body: The first 100 LetsBe Biz customers get 2× AI tokens for 12 months at standard pricing. [Learn more →]

1.2.7 FAQ

Can I switch plans later? Yes. Upgrade or downgrade anytime. Changes take effect on your next billing cycle.
  Is there a free trial? We offer a paid beta with founding member benefits (2× AI tokens for 12 months). No free tier — we want users who are serious about using it, and we want to give them a serious product.
  What happens if I run out of tokens? You can buy additional tokens at transparent, cost-based rates. We don't mark them up aggressively — you'll see the per-model pricing before you buy.
  Can I cancel anytime? Yes. No annual contracts, no cancellation fees. Your data stays on your server even after cancellation — you'll have 30 days to export everything.

What AI models do you use? We route tasks to the best model for the job. Standard tasks use cost-efficient models. Premium models (GPT 5.2, Claude, Gemini Pro) are available on demand for Build and above.

Where is my data stored? On a dedicated server in the region you choose — Nuremberg, Germany for EU customers or Manassas, Virginia for North American customers. Your data never touches our systems or any shared infrastructure.

Are all the tools really open source? Yes. Every tool on your server is open-source software running under its original license — AGPL, MIT, Apache, and others. We publish the full list with licenses and links on our Open-Source Tools page. You own the deployment.

Can I use my own API keys for AI models? Not at launch, but we're building toward it. We plan to offer a Bring Your Own Key option for advanced users in a future update. For now, our managed AI handles model selection, routing, and failover automatically — most customers prefer that.

1.3 Page 3: Founding Members

1.3.1 Hero

Headline: Double the AI. First 100 customers.

Subheadline: You're early. We want to make that worth it. The first 100 LetsBe Biz customers get 2× AI tokens for 12 months — at standard pricing. Plus direct access to the founder and a seat at the table.

CTA: Become a Founding Member

1.3.2 Section: What You Get

Headline: The founding member deal.

What	Detail
2× AI tokens	Double the AI capacity for your first 12 months. Lite gets ~16M tokens/mo instead of ~8M. Build gets ~30M instead of ~15M. And so on.
Standard pricing	No premium. No surcharge. You pay the same as everyone else — you just get more.
Direct founder access	A direct line to Matt. Not a support ticket — an actual conversation.
Roadmap influence	Your feedback shapes what we build next. Founding members vote on feature priorities.

What	Detail
Founding member badge	Permanent recognition in-product. You were here first.
12-month lock	Your 2× tokens last a full year from your signup date. No strings.

1.3.3 Section: Why We're Doing This

Headline: This isn't a discount. It's a partnership.

Body: We're launching something new. The first 100 people who trust us with their business are taking a real bet — and we respect that.

Double the AI tokens isn't a marketing gimmick. It's our way of saying: you're investing your time and trust in an early product, so we're investing extra capacity in your success.

You'll hit bugs. You'll have opinions. You'll want things to work differently. Good — that's exactly what we need. Founding members aren't just customers. You're the people who shape what this becomes.

1.3.4 Section: What It Costs

Plan	Monthly price	Standard tokens	Founding member tokens
Lite	€29	~8M/mo	**~16M/mo**
Build	€45	~15M/mo	**~30M/mo**
Scale	€75	~25M/mo	**~50M/mo**
Enterprise	€109	~40M/mo	**~80M/mo**

Same price. Double the AI. For 12 months.
CTA: Choose Your Plan

1.3.5 Section: How Many Are Left

`[DYNAMIC ELEMENT: Counter showing "X of 100 founding member spots remaining." This creates honest urgency without fake countdown timers. Update manually or via a simple backend counter.]`

1.3.6 FAQ (Founding Members)

When does my 12 months start? From the day you sign up and your server is provisioned. Not from the public launch date.

What happens after 12 months? Your token allocation returns to the standard amount for your tier. Everything else stays the same — your tools, your data, your server.

Can I upgrade or downgrade during the founding period? Yes. Your 2× multiplier applies to whatever tier you're on.

Is this a beta? Will things break? Yes, this is a beta. Things will break. You'll have direct access to the founder to report issues, and we'll fix them fast. That's the deal — you get more AI, we get your honest feedback.

Can I get a refund? We offer a 14-day money-back guarantee. If LetsBe Biz isn't for you in the first two weeks, we'll refund you in full.

1.4 Page 4: Features & Tools

1.4.1 Hero

Headline: Everything your business runs on. One server.

Subheadline: 28+ tools, pre-installed and connected. AI agents that use them. A private server that's yours. Here's what's inside.

1.4.2 Section: AI Agents

Headline: AI that doesn't just talk — it works.

Body: Your LetsBe AI agents have access to every tool on your server. They don't give you advice and leave you to do the work. They take action: send emails, update your CRM, create invoices, organize files, and handle the tasks that pile up.

Three model presets:

Preset	What it handles	Speed
Basic Tasks	Quick lookups, sorting, simple drafts	Fastest, lowest token cost
Balanced	Day-to-day work — emails, CRM updates, project tasks	Fast, efficient
Complex Tasks	Deep analysis, long-form writing, multi-step reasoning	Thorough, higher token cost

Premium AI models (GPT 5.2, Claude Sonnet, Gemini Pro) available on demand for Build tier and above.

Your AI routes tasks to the right model automatically. You don't have to think about it.

1.4.3 Section: Tool Grid

Headline: The tools.

`[LAYOUT: Card grid. Each card has an icon, tool name, 1-2 sentence description, and a tag for the category. Clicking a card could expand to show more detail – or not, for V1.]`

Communication & Marketing

Tool	What it does
Email	Full email hosting on your domain
Email Marketing	Newsletters, automations, subscriber management
CRM	Contacts, deals, pipelines, activity tracking
Forms & Surveys	Build forms, collect responses, feed data into your CRM
Website Builder	Host landing pages and sites directly on your server
Chat	Internal team messaging and channels

Productivity & Operations

Tool	What it does
Project Management	Boards, lists, timelines, task assignment
Calendar	Scheduling, availability, shared calendars
Notes & Wiki	Knowledge base, documentation, meeting notes
File Storage	Private cloud storage with sharing and versioning
Invoicing & Billing	Send invoices, track payments, manage clients
Time Tracking	Log hours, generate reports, bill clients

Automation & Intelligence

Tool	What it does
Workflow Automation	Connect tools, trigger actions, build multi-step workflows
Analytics	Dashboards and reports across your business data
AI Agents	Autonomous agents that work across all your tools

Tool	What it does
Document Generation	AI-powered document creation from templates

...and more. New tools are added regularly. Your server updates automatically.

1.4.4 Section: How It All Connects

Headline: Everything talks to everything.

Body: Your CRM knows about your invoices. Your AI reads your project board. Your email marketing pulls from your contact list. When a lead fills out a form, your CRM updates, your AI drafts a follow-up, and your project board gets a new task — automatically.

No Zapier. No middleware. No duct tape. It's all on one server, sharing one database.

`[VISUAL PLACEHOLDER: Simple diagram showing tool icons connected by lines, with an AI node in the center. Keep it clean and minimal - not a spider web.]`

1.4.5 Section: Your Server

Headline: Not "the cloud." Your cloud.

Body: Every LetsBe Biz customer gets a dedicated server — a real machine in the data center region they choose, running your tools and your AI. Nobody else has access. No shared resources. No noisy neighbors.

- **Managed for you** — We handle updates, security patches, backups, and monitoring
- **EU or NA data centers** — Netcup infrastructure in Germany or Virginia, your choice at signup
- **Full root concept** — It's your server, running your data, under your control
- **Resource Server upgrades** — Need more power? Add compute capacity starting at €6/month

1.5 Page 5: About

1.5.1 Hero

Headline: Built by an entrepreneur who got tired of the tool tax.

1.5.2 Section: The Story

Body:

I'm Matt. I've started businesses, run projects, freelanced, and consulted — and every time, I ended up spending half my time managing tools instead of doing the actual work.

CRM here. Invoicing there. Newsletter tool over there. Project board somewhere else. An AI chatbot that could answer questions but couldn't actually *do* anything. Every tool was another login, another subscription, another integration to maintain. And none of them talked to each other.

I kept thinking: why isn't there one place that handles all of this? One server I control, with tools that actually work together, and an AI that doesn't just chat — it takes action?

So I built it.

LetsBe Biz is what I wanted to exist as a founder. A single platform with 28+ business tools and AI agents that actually run them — on a private server that's yours. No data harvesting. No vendor lock-in. No patchwork of subscriptions.

We're a small team, bootstrapped, and building for people like us. If you've ever felt like you're spending more time on your tools than on your business, LetsBe was built for you.

— **Matt Ciaccio**, Founder matt@letsbe.solutions

[PHOTO PLACEHOLDER: Professional but not corporate headshot. Real setting - desk, workspace, or even a coffee shop. Should feel authentic to the brand.]

1.5.3 Section: What We Believe

Three principles (these could be icon + headline + short paragraph):

Your data is yours. We don't host your data on shared infrastructure. We don't train AI on it. We don't sell it. Every customer gets their own server. What's on it belongs to you — full stop.

Tools should work together. The SaaS model breaks everything into silos. We put it all back on one server so your CRM, email, invoicing, and AI can actually talk to each other without duct-tape integrations.

AI should act, not just answer. Chatbots are a parlor trick. Real AI agents read your data, make decisions, and take action across your tools. That's the difference between an assistant and a workforce.

1.5.4 Section: The Company

Body: LetsBe Biz is a product of **LetsBe Solutions LLC**. We're headquartered in the US, with infrastructure hosted in the EU. We're bootstrapped, independent, and building for the long term.

1.5.5 Footer CTA

Headline: Questions? Opinions? Ideas?
   Body: I read every email. Seriously.
   CTA: matt@letsbe.solutions

1.6 Page 6: Open-Source Tools

This page reinforces our infrastructure-provider positioning, earns open-source community goodwill, and provides SEO backlink value. Source of truth: Tool Catalog v2.2.

1.6.1 Hero

Headline: Built on open source. Transparent by design.
   Subheadline: Every tool on your LetsBe server is open-source software running under its original license. We host and manage it — you own the deployment, the data, and the license. Here's exactly what powers your business.

1.6.2 Section: How It Works

Headline: We're your infrastructure team, not a software vendor.
   Body: LetsBe deploys open-source tools on your dedicated server. Each tool runs under its own upstream license — the same license you'd get if you installed it yourself. We handle provisioning, updates, backups, and AI integration so you don't have to.
   You get full SSH access and every credential. If you ever want enterprise features for a specific tool, you purchase the license directly from the tool's vendor — we'll help you deploy it.
   Three proof points:

- **Your license, your choice** — Every tool runs under its open-source license. Want enterprise features? Buy them directly from the vendor.
- **Full access** — SSH access, all credentials, complete transparency. Nothing is hidden.
- **No lock-in** — Your tools, your data, your server. Export everything, anytime.

1.6.3 Section: Current Tool Stack

Headline: 28 tools. All open-source. All yours.

[LAYOUT: Card grid. Each card shows: tool icon/logo, tool name, one-line role description, license badge (e.g., "AGPL-3.0", "MIT", "Apache-2.0"), and a link to the upstream project. Cards grouped by category.]

Cloud & Files

Tool	Role	License	Project
Nextcloud	Cloud storage, file sharing, collaboration	AGPL-3.0	nextcloud.com
MinIO	S3-compatible object storage	AGPL-3.0	min.io

1.6.4 Section: What's Coming Next

Headline: We're always adding tools.

Body: Our expansion roadmap includes 27 additional tools across e-commerce, HR, accounting, helpdesk, and more. Every tool we add goes through the same process: license audit, security review, AI integration testing, and SSO compatibility.

Want to request a tool? Drop us a line at matt@letsbe.solutions.

1.6.5 Section: Enterprise Licenses

Headline: Need enterprise features? Go direct.

Body: Some tools offer paid enterprise editions with features like advanced dashboards, multi-tenancy, or premium support. Since every tool on your server runs under its own license, you can purchase enterprise upgrades directly from the tool vendor. We'll help you deploy and configure them on your server.

You're never locked into our choices. The tools are yours.

1.6.6 Footer CTA
